

# Hands-on Lab: String Patterns, Sorting and Grouping in MySQL using phpMyAdmin

Estimated time needed: 20 minutes

In this lab, you will learn how to create tables and load data in the MySQL database service using the phpMyAdmin graphical user interface (GUI) tool.

### Software Used in this Lab

In this lab, you will use MySQL is a Relational Database Management System (RDBMS) designed to efficiently store, manipulate, and retrieve data.

To complete this lab you will utilize MySQL relational database service available as part of IBM Skills Network Labs (SN Labs) Cloud IDE. SN Labs is a virtual lab environment used in this course.

### **Database Used in this Lab**

The database used in this lab is an internal database. You will be working on a sample HR database. This HR database schema consists of 5 tables called **EMPLOYEES**, **JOB\_HISTORY**, **JOBS**, **DEPARTMENTS** and **LOCATIONS**. Each table has a few rows of sample data. The following diagram shows the tables for the HR database:

#### SAMPLE HR DATABASE TABLES

EMPLOYEE	S														
EMP_ID	F_NAME	L_NAM	E S	SN	B_DATI	E	SEX	ADDRESS		JOB_ID	SALAF	RY	MANAGE	R_ID	DEP_ID
E1001	John	Thomas	1	23456	1976-0	1-09	М	5631 Rice, C	ak Park,IL	100	10000	00	30001		2
E1002	Alice	James	1	23457	1972-0	7-31	F	980 Berry In	, Elgin,IL	200	80000	0	30002		5
E1003	Steve	Wells	1	23458	1980-0	8-10	М	291 Springs,	. Springs, Gary,IL		50000		30002		5
JOB_HISTO	DRY						J	OBS							
EMPL_ID	START_D	START_DATE JOBS_ID		DEPT_	JOB_IDENT		DB_IDENT	JOB_TITLE		MIN	MIN_SALARY N		X_SALAR		
E1001	2000-01	2000-01-30 100		2			10	100 Sr. Arch		itect		60000		100	000
E1002	2010-08	2010-08-16 2		0 5			20	200 Sr.Soft		wareDeveloper		60000		800	00
E1003	2016-08	2016-08-10 300			5		30	00 Jr.Softw		vareDeveloper		4000	40000		00
DEPARTMI	ENTS							LOCATIO	ONS						
DEPT_ID_DE	P DEP_NA	DEP_NAME N			GER_ID	D FOC'ID		LOCT_ID		DEP_ID_LOC					
2	Architec	Architect Group 3			30001 L0001			L0001		2					
5	Softwar	Software Development			30002			L0002		5					
7	Design 1	Design Team			003 L0003			L0003		7					

### **Objectives**

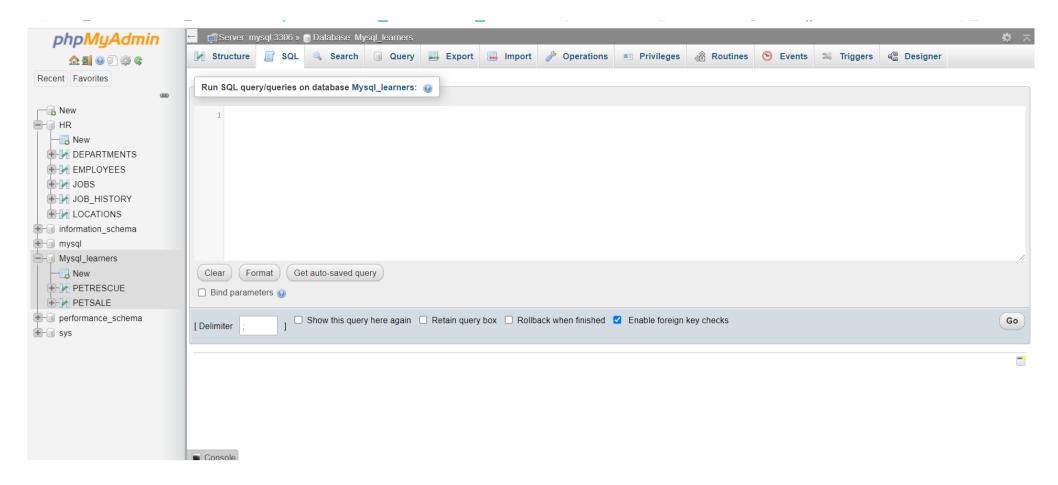

After completing this lab, you will be able to:

Software

- Simplify a SELECT statement by using string patterns, ranges, or sets of values
- Sort the result set in either ascending or descending order and identify which column to use for the sorting order
- Eliminate duplicates from a result set and further restrict a result set

30004

Once the tables are loaded open the sql editor to start executing the functions.

# **Exercise 1: String Patterns**

In this exercise, you will go through some SQL problems on String Patterns.

1. Problem:

Retrieve all employees whose address is in Elgin,IL.

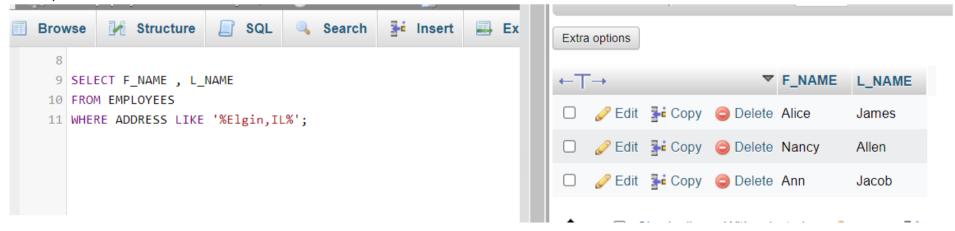

**▼** Hint

Use the LIKE operator to find similar strings.

**▼** Solution

```
SELECT F_NAME , L_NAME
FROM EMPLOYEES
WHERE ADDRESS LIKE '%Elgin, IL%';
```

**▼** Output

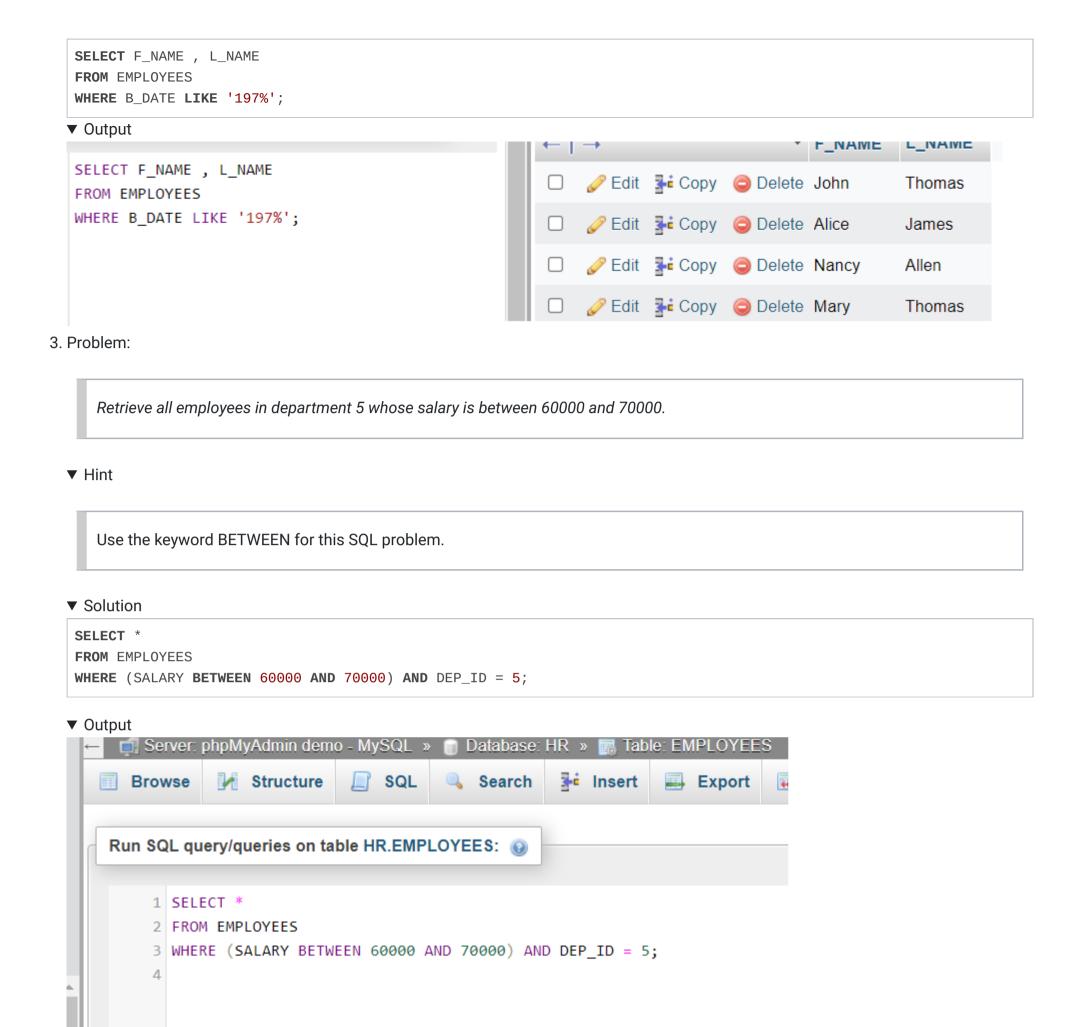

2. Problem:

Retrieve all employees who were born during the 1970's.

**▼** Hint

Use the LIKE operator to find similar strings.

**▼** Solution

# **Exercise 2: Sorting**

In this exercise, you will go through some SQL problems on Sorting.

#### 1. Problem:

Retrieve a list of employees ordered by department ID.

#### **▼** Hint

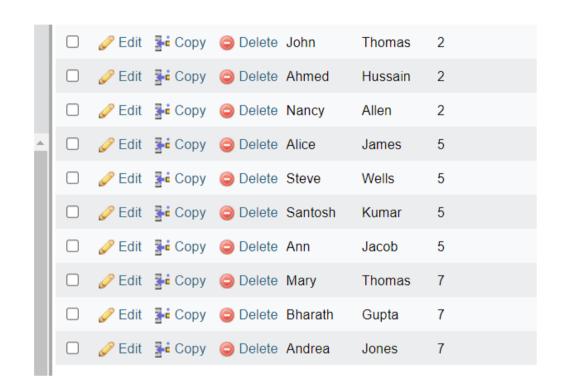

Use the ORDER BY clause for this SQL problem. By default, the ORDER BY clause sorts the records in ascending order.

#### **▼** Solution

```
SELECT F_NAME, L_NAME, DEP_ID
FROM EMPLOYEES
ORDER BY DEP_ID;
```

#### **▼** Output

```
1 SELECT F_NAME, L_NAME, DEP_ID
2 FROM EMPLOYEES
3 ORDER BY DEP_ID;
```

#### 2. Problem:

Retrieve a list of employees ordered in descending order by department ID and within each department ordered alphabetically in descending order by last name.

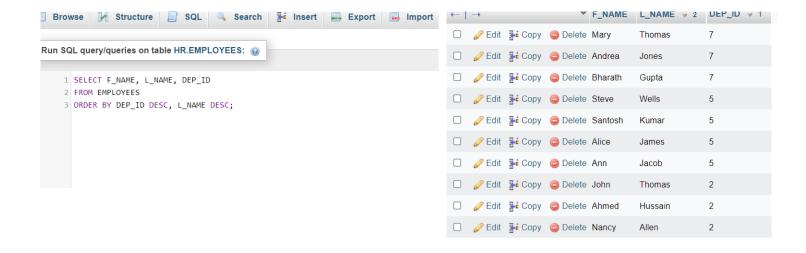

#### **▼** Hint

Use the ORDER BY clause with DESC for this SQL problem.

#### **▼** Solution

```
SELECT F_NAME, L_NAME, DEP_ID
FROM EMPLOYEES
ORDER BY DEP_ID DESC, L_NAME DESC;
```

#### **▼** Output

#### 3. (Optional) Problem:

In SQL problem 2 (Exercise 2 Problem 2), use department name instead of department ID. Retrieve a list of employees ordered by department name, and within each department ordered alphabetically in descending order by last name.

#### **▼** Hint

Department name is in the DEPARTMENTS table. So your query will need to retrieve data from more than one table. Don't worry if you are not able to figure this SQL problem out. We'Il cover working with multiple tables in the lecture **Working with Multiple Tables**.

#### **▼** Solution

```
SELECT D.DEP_NAME , E.F_NAME, E.L_NAME

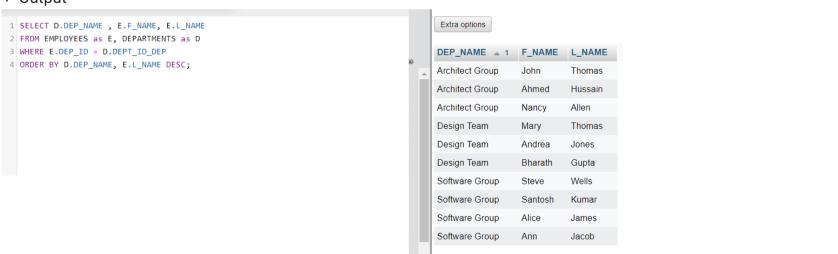

FROM EMPLOYEES as E, DEPARTMENTS as D

WHERE E.DEP_ID = D.DEPT_ID_DEP

ORDER BY D.DEP_NAME, E.L_NAME DESC;
```

In the SQL Query above, D and E are aliases for the table names. Once you define an alias like D in your query, you can simply write D.COLUMN\_NAME rather than the full form DEPARTMENTS.COLUMN\_NAME.

#### **▼** Output

### **Exercise 3: Grouping**

In this exercise, you will go through some SQL problems on Grouping.

**NOTE:** The SQL problems in this exercise involve usage of SQL Aggregate functions AVG and COUNT. COUNT has been covered earlier. AVG is a function that can be used to calculate the Average or Mean of all values of a specified column in the result set. For example, to retrieve the average salary for all employees in the EMPLOYEES table, issue the query: SELECT\_AVG(SALARY) FROM EMPLOYEES;. You will learn more about AVG and other aggregate functions later in the lecture **Built-in Database Functions**.

#### 1. Problem:

For each department ID retrieve the number of employees in the department.

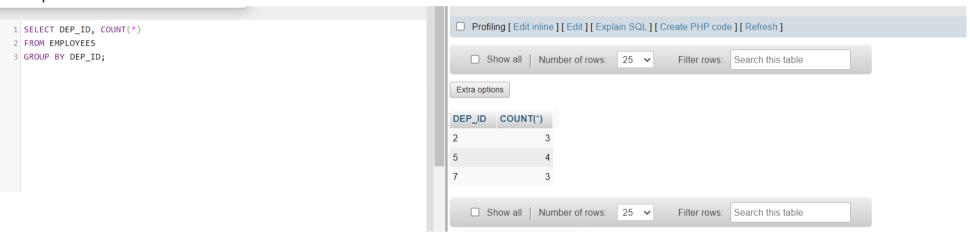

#### **▼** Hint

Use COUNT(\*) to retrieve the total count of a column, and then GROUP BY.

#### **▼** Solution

```
SELECT DEP_ID, COUNT(*)
FROM EMPLOYEES
GROUP BY DEP_ID;
```

#### ▼ Output

#### 2. Problem:

For each department retrieve the number of employees in the department, and the average employee salary in the department.

#### **▼** Hint

Use COUNT(\*) to retrieve the total count of a column, and AVG() function to compute average salaries, and then GROUP BY.

#### ▼ Solution

```
SELECT DEP_ID, COUNT(*), AVG(SALARY)
FROM EMPLOYEES
GROUP BY DEP_ID;
```

#### **▼** Output

```
Extra options

SELECT DEP_ID, COUNT(*), AVG(SALARY)

FROM EMPLOYEES

GROUP BY DEP_ID;

DEP_ID CC

2

5
```

Extra optio		
DEP_ID	COUNT(*)	AVG(SALARY)
2	3	86666.666667
5	4	65000.000000
7	3	66666.666667

#### 3. Problem:

Label the computed columns in the result set of SQL problem 2 (Exercise 3 Problem 2) as NUM\_EMPLOYEES and AVG\_SALARY.

#### **▼** Hint

Use SQL Aliases: column\_name AS alias\_name. For example, AVG(SALARY) AS "AVG\_SALARY".

#### **▼** Solution

```
SELECT DEP_ID, COUNT(*) AS "NUM_EMPLOYEES", AVG(SALARY) AS "AVG_SALARY"
FROM EMPLOYEES
GROUP BY DEP_ID;
```

#### **▼** Output

#### 4. Problem:

In SQL problem 3 (Exercise 3 Problem 3), order the result set by Average Salary..

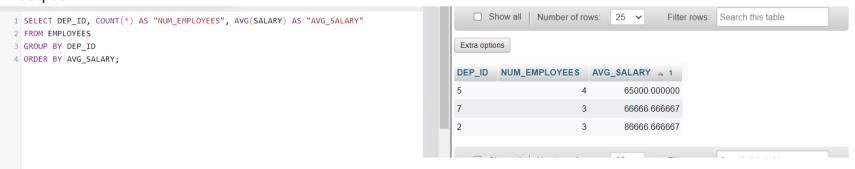

#### **▼** Hint

Use ORDER BY after the GROUP BY.

#### ▼ Solution

```
SELECT DEP_ID, COUNT(*) AS "NUM_EMPLOYEES", AVG(SALARY) AS "AVG_SALARY"
FROM EMPLOYEES
GROUP BY DEP_ID
ORDER BY AVG_SALARY;
```

#### ▼ Output

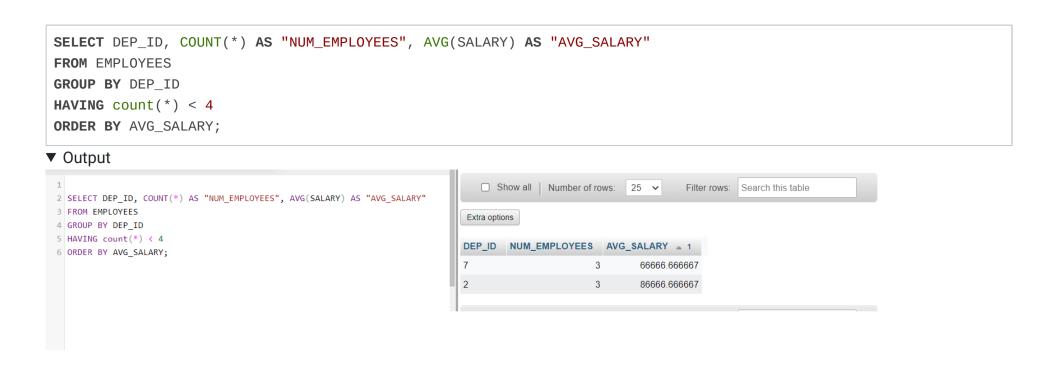

#### 5. Problem:

In SQL problem 4 (Exercise 3 Problem 4), limit the result to departments with fewer than 4 employees.

#### **▼** Hint

Use HAVING after the GROUP BY, and use the count() function in the HAVING clause instead of the column label.

#### **▼** Solution

## **Solution Script**

If you would like to run all the solution queries of the SQL problems of this lab with a script, download the script below. Import the script to phpadmin mysql interface and run. Follow <a href="Hands-on Lab">Hands-on Lab</a>: Create tables using SQL scripts and Load data into tables on how to upload a script to phpmyadmin console and run it.

• <u>StringPattern-Sorting-Grouping\_Solution\_Script.sql</u>

Congratulations! You have completed this lab, and you are ready for the next topic.
