

Hands-on Lab: Working with Multiple Tables

Estimated time needed: 30 minutes

In this lab, you will through some SQL practice problems that will provide hands-on experience with SQL queries that access multiple tables. You will be:

- · Accessing Multiple Tables with Sub-Queries
- Accessing Multiple Tables with Implicit Joins

How does an Implicit version of CROSS JOIN (also known as Cartesian Join) statement syntax look?

```
SELECT column_name(s)
FROM table1, table2;
```

How does an Implicit version of INNER JOIN statement syntax look?

```
SELECT column_name(s)
FROM table1, table2
WHERE table1.column_name = table2.column_name;
```

Software Used in this Lab

In this lab, you will use <u>IBM Db2 Database</u>. Db2 is a Relational Database Management System (RDBMS) from IBM, designed to store, analyze and retrieve the data efficiently.

To complete this lab you will utilize a Db2 database service on IBM Cloud. If you did not already complete this lab task earlier in this module, you will not yet have access to Db2 on IBM Cloud, and you will need to follow the lab below first:

• Hands-on Lab: Sign up for IBM Cloud, Create Db2 service instance and Get started with the Db2 console

Database Used in this Lab

Design Team

Software

The database used in this lab is an internal database. You will be working on a sample HR database. This HR database schema consists of 5 tables called **EMPLOYEES**, **JOB_HISTORY**, **JOBS**, **DEPARTMENTS** and **LOCATIONS**. Each table has a few rows of sample data. The following diagram shows the tables for the HR database:

SAMPLE HR DATABASE TABLES

EMPLOYEE	S														
EMP_ID	F_NAME	L_NAM	L_NAME SSN		B_DATE		SEX	ADDRESS		JOB_ID	SALARY		MANAGER_ID		DEP_ID
E1001	John	Thomas	Thomas 1		1976-01-09		М	5631 Rice, OakPark,IL		100	100000 300		30001		2
E1002	Alice	James		123457	1972-0	7-31	F	980 Berry In	, Elgin,IL	200	80000	0	30002		5
E1003	Steve	Wells		123458	1980-0	8-10	М	291 Springs	Gary,IL	300	50000	0	30002		5
ЈОВ_НІЅТС	DRY						JC	OBS

L0003

L0003

L0004

30004

NOTE: This lab requires you to have all 5 of these tables of the HR database populated with sample data on Db2. If you didn't complete the earlier lab in this module, you won't have the tables above populated with sample data on Db2, so you will need to go through the lab below first:

• Hands-on Lab: Create tables using SQL scripts and Load data into tables

Objectives

After completing this lab you will be able to:

- · Write SQL queries that access more than one table
- · Compose queries that access multiple tables using a nested statement in the WHERE clause
- Build queries with multiple tables in the FROM clause
- Write Implicit Join queries with join criteria specified in the WHERE clause
- Specify aliases for table names and qualify column names with table aliases

NOTE: Make sure that you are using the CSV file and datasets from the same instruction file.

Instructions

When you approach the exercises in this lab, follow the instructions to run the queries on Db2:

- Go to the <u>Resource List</u> of IBM Cloud by logging in where you can find the Db2 service instance that you created in a previous lab under **Services** section. Click on the **Db2-xx service**. Next, open the Db2 Console by clicking on **Open Console** button. Click on the 3-bar menu icon in the top left corner and go to the **Run SQL** page. The Run SQL tool enables you to run SQL statements.
 - If needed, follow <u>Hands-on Lab</u>: <u>Sign up for IBM Cloud, Create Db2 service instance and Get started with the Db2 console</u>

Exercise 1: Accessing Multiple Tables with Sub-Queries

1. Problem:

Retrieve only the EMPLOYEES records that correspond to jobs in the JOBS table.

▼ Solution select * from employees where JOB_ID IN (select JOB_IDENT from jobs); ▼ Output Result set 1 EMP_ID F_NAME L_NAME SSN B_DATE JOB_ID SALARY MANAGER_ID E1001 123456 1976-01-09 5631 Rice, OakPark,IL 100 100000.00 Alice 123457 980 Berry In, Elgin, IL 200 80000.00 30002 James E1003 Wells 123458 1980-08-10 291 Springs, Gary, IL 50000.00 Steve E1004 Santosh Kumar 123459 1985-07-20 511 Aurora Av, Aurora,IL 400 60000.00 30004 E1005 123410 216 Oak Tree, Geneva, IL 500 70000.00 Ahmed Hussain 1981-01-04 30001 E1006 123411 1978-02-06 111 Green Pl, Elgin,IL 90000.00 Allen 600 30001 Nancy

3. Problem:

E1008

Retrieve JOB information and who earn more than \$70,000.

123413

1985-05-06

Μ

Gupta

▼ Solution

select JOB_TITLE, MIN_SALARY, MAX_SALARY, JOB_IDENT from jobs where JOB_IDENT IN (select JOB_ID from employees
where SALARY > 70000);

▼ Output

4. Problem:

Retrieve JOB information and whose birth year is after 1976.

▼ Solution

select JOB_TITLE, MIN_SALARY, MAX_SALARY, JOB_IDENT from jobs where JOB_IDENT IN (select JOB_ID from employees
where YEAR(B_DATE)>1976);

▼ Output

5. Problem:

Retrieve JOB information for female employees whose birth year is after 1976.

▼ Solution

select JOB_TITLE, MIN_SALARY, MAX_SALARY, JOB_IDENT from jobs where JOB_IDENT IN (select JOB_ID from employees
where YEAR(B_DATE)>1976 and SEX='F');

▼ Output

Result set 1				Search	Q <u>↑</u>
JOB_TITLE	MIN_SALARY	MAX_SALARY	JOB_IDENT		
Sr. Designer	70000.00	90000.00	220		
Sr. Designer	70000.00	90000.00	234		
Lead Architect	70000.00	100000.00	600		

Exercise 2: Accessing Multiple Tables with Implicit Joins

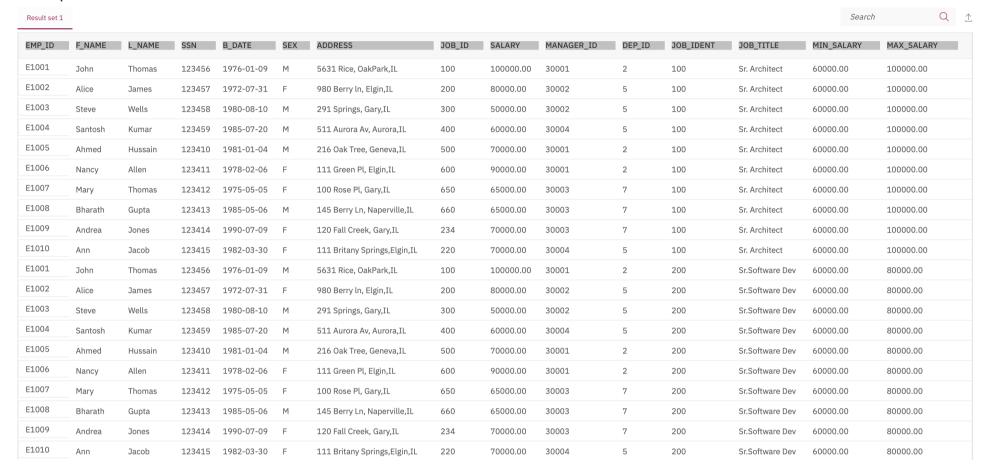

1. Problem:

Perform an implicit cartesian/cross join between EMPLOYEES and JOBS tables.

▼ Solution

select * from employees, jobs;

▼ Output

2. Problem:

Retrieve only the EMPLOYEES records that correspond to jobs in the JOBS table.

▼ Solution

select * from employees, jobs where employees.JOB_ID = jobs.JOB_IDENT;

▼ Output

3. Problem:

Redo the previous query, using shorter aliases for table names.

▼ Output Result set 1 EMP_ID F_NAME L_NAME SSN B_DATE SEX JOB_ID SALARY MANAGER_ID DEP_ID JOB_IDENT MAX_SALARY JOB_TITLE MIN_SALARY E1001 123456 1976-01-09 100000.00 100000.00 E1002 123457 1972-07-31 980 Berry In, Elgin,IL 200 80000.00 200 Sr.Software Dev 80000.00 E1003 Steve Wells 123458 1980-08-10 291 Springs, Gary,IL 50000.00 Jr.Software Dev 60000.00 E1004 123459 1985-07-20 511 Aurora Av, Aurora,IL 400 60000.00 400 Jr.Software Dev 40000.00 60000.00 Kumar E1005 Ahmed 123410 1981-01-04 216 Oak Tree, Geneva,IL 500 70000.00 30001 500 Jr. Architect 50000.00 70000.00 Hussain E1006 Allen 123411 1978-02-06 111 Green Pl, Elgin,IL 600 90000.00 600 70000.00 100000.00 Nancy 30001 Lead Architect E1007 123412 1975-05-05 100 Rose Pl, Gary,IL 60000.00 70000.00 Mary 650 65000.00 30003 650 Jr. Designer **Thomas** E1008 70000.00 123413 1985-05-06 145 Berry Ln, Naperville, IL 60000.00 Bharath Gupta 660 65000.00 30003 660 Jr. Designer E1009 123414 1990-07-09 120 Fall Creek, Gary, IL 70000.00 234 70000.00 90000.00 Andrea Jones 234 30003 Sr. Designer E1010 123415 1982-03-30 F 111 Britany Springs, Elgin, IL 220 70000.00 220 70000.00 90000.00 Ann Jacob 30004 Sr. Designer

4. Problem:

Redo the previous query, but retrieve only the Employee ID, Employee Name and Job Title.

select * from employees E, jobs J where E.JOB_ID = J.JOB_IDENT;

▼ Solution

select EMP_ID, F_NAME, L_NAME, JOB_TITLE from employees E, jobs J where E.JOB_ID = J.JOB_IDENT;

▼ Output

5. Problem:

Redo the previous query, but specify the fully qualified column names with aliases in the SELECT clause.

▼ Solution

select E.EMP_ID, E.F_NAME, E.L_NAME, J.JOB_TITLE from employees E, jobs J where E.JOB_ID = J.JOB_IDENT;

▼ Output

Solution Script

If you would like to run all the solution queries of the SQL problems of this lab with a script, download the script below. Upload the script to the Db2 console and run. Follow Hands-on Lab: Create tables using SQL scripts and Load data into tables on how to upload a script to Db2 console and run it.

• MultipleTables_Solution_Script.sql

Congratulations! You have completed this lab, and you are ready for the next topic.
